**Theme:** Leadership, management, nursing education.

**Keywords:** Family-centred care, health care quality, Neonatal Intensive Care Unit (NICU) design, NICU environment.

**Introduction:** Family-centered care (FCC) in NICUs is related to staff culture and the organization of the unit.

**Aim:** To describe the organizational characteristics and services for families in Italian NICUs.

**Methods:** This survey involved 105 NICUs in Italy. The Italian version of the 'FCC in the NICUs: A Self-Assessment Inventory' developed by the Institute for FCC was sent to the nurse managers in January 2015.

**Results:** Forty-seven NICUs answered (49%). The means of the NICU characteristics are number of beds: 20; newborns discharged/year: 331, of which very low birth weight infant: 68; unit's rooms: 3.7). The total mean score of the 10 areas explored by questionnaire was 2.6 (on 5 points Likert scale) for the 'status' and of 2.3 (on 3 points scale) for priority for change.

**Conclusion:** The results show an organizational lack, but also the consciousness of the need of change. Sharing new organizational strategies could be an important issue for the future.
